

KEY QUESTIONS TO ANSWER

- We take only one data sample in a shift for SPC, Is this enough ?
- Our Cpk is greater than 1.67, still we have products outside specification. How is this possible ?
- Our control limits appear very tight, therefore we have many points outside the control limits. How to manage this ?
- Cp, Cpk or Pp,Ppk – Which one to choose ?
- How to handle one sided specifications ?
- How to handle data that forms non-normal distribution ?
- How frequently we can change our control limits ?
- What is meant by Six Sigma Quality process ?

"I am forever learning and changing"

NATIONAL INSTITUTION FOR QUALITY AND RELIABILITY

Chennai Presents

www.niqr.in

SPC is CASH - A story on how organizations earn cash by implementing SPC"

on 3rd and 4th May 2019

Knowledge sharing 80% through practical exercises, case studies and activities, 20% through theory

R.NANDA KUMAR

Nanda is a graduate in mechanical engineering and holds a post graduate degree in Management from IIM. He has facilitated many continual improvement teams in various manufacturing and service organizations. Nanda's approach to continual improvement is unique as he insists on implementation, sustainability and quantified proof of improvements. Implemented SPC & MSA successfully in the shop floor in a few organizations that won the Deming Award.
